Profile Cleaner TSE

Keeping User Profile Size to a Minimum

COMPACTS BLOATED PROFILES & REMOVES SLOWDOWNS

Profile Cleaner TSE minimizes the size of roaming user profiles that reside on a Profile Server. A user's roaming profile contains the configuration information for each user when logging on or off of a Terminal Server, and is typically stored on a Profile Server. When users logon to a Terminal Server, their profile gets copied from the Profile Server to the Terminal Server, and back again at logoff. Over time, user profiles grow in size. This soon becomes a problem, because as they become larger, it takes longer for users to logon and logoff, causing other users to experience slowdowns on the same Terminal Server.

FEATURES

- COMPACTS BLOATED **NTUSER.DAT** FILES
- REMOVES TEMPORARY FILES, MEMORY DUMPS, AND OTHER MATCHING FILENAMES
- BUILT-IN SCHEDULING OR RUN-ON-DEMAND EXECUTION

BENEFITS

- Faster user logons and logoffs
- Easy, central installation on a Profile Server
- Faster user response times by minimizing network congestion through small user profiles
- Compacts ntuser.dat file

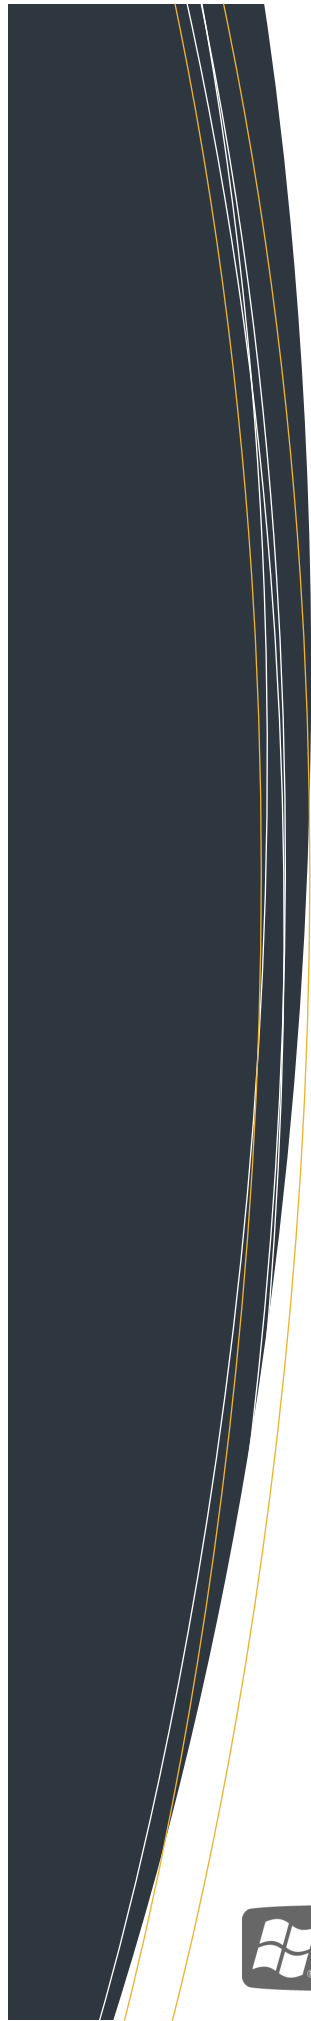

HOW IT WORKS

Profile Cleaner runs on your Profile Server. Through its own built-in scheduling, Profile Cleaner searches through all of the user profiles in the Profiles shared folder. It automatically removes not only temporary files (or any file that matches your wildcard search), it even **compacts the ntuser.dat files**. It does this through a proprietary algorithm developed by WM Software. Some ntuser.dat files can become quite large, in the hundreds of megabytes, and Profile Cleaner TSE can even shrink the size of these files. Or if you are just looking to keep certain profiles to a minimum size, Profile Cleaner TSE can execute these functions on demand.

MANAGEMENT

Profile Cleaner is managed on the Profile Server. The cleaning of user profiles through wildcard file matching (i.e. *.tmp) can be done either scheduled or on-the-fly.
