Safe AutoLogon

Securely and Automatically Logon to Windows®

SINGLE COMPUTER AND ENTERPRISE-READY

Safe AutoLogon allows secure, automatic logon, with full 256-bit AES encryption protection. This patent-pending software has many uses for companies that need to provide users access to resources and avoid help desk issues of forgotten usernames and passwords. With its companion product, Safe AutoLogon Password Server, passwords are centrally managed, synched with Active Directory, and remotely managed.

BENEFITS

- ALLOWS AUTOMATIC SECURE LOGON TO COMPUTERS
- FREES TIME OF IT STAFF BY NOT MANUALLY ADMINISTERING EACH PC
- SAVES HELP DESK STAFF TIME FROM MANAGING USERS' PASSWORDS
- DOES NOT REQUIRE PCS TO BE POWERED ON TO MANAGE PASSWORDS
- ENSURES SECURITY WITH 256-BIT AES ENCRYPTION

SAFE, SIMPLE, SECURE

Typical automatic logon methods include free text in the Registry and/or custom programs such as TweakUI. These programs leave the username and password dangerously exposed in unencrypted plain text. Safe AutoLogon instead encrypts them with full 256-bit AES encryption to keep them safe from prying eyes.

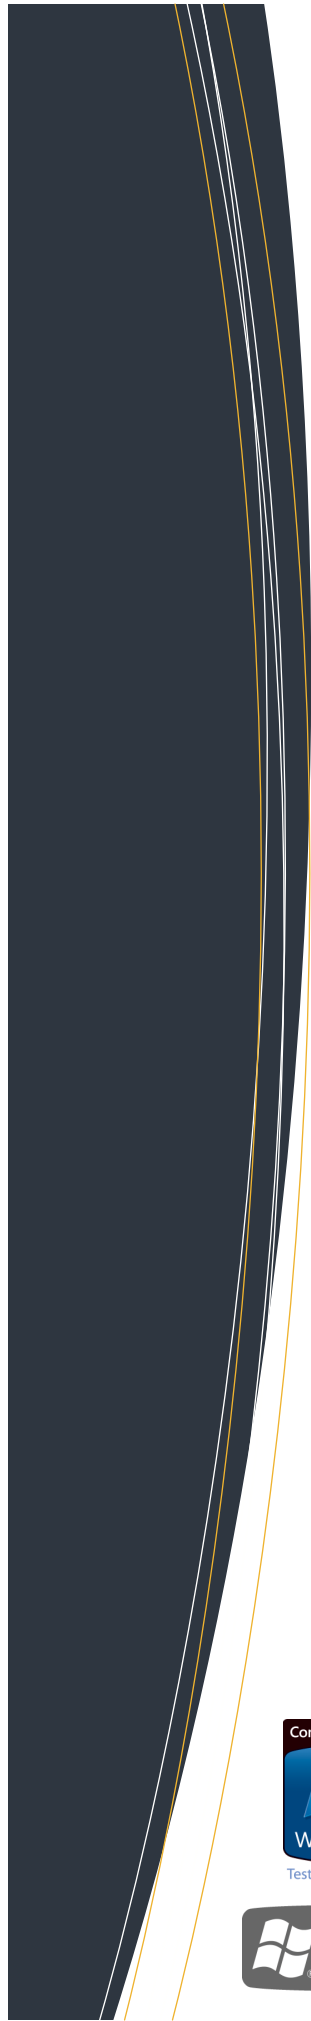

MANAGEMENT

User passwords can be centrally managed with our Safe AutoLogon Password Server (SALPS) product. SALPS servers store the logon names, passwords, and domain for the clients running Safe AutoLogon. This two-prong solution allows passwords to be updated on the clients before the automatic logon even takes place, thus eliminating any problems that customers can run into in trying to update their Safe AutoLogon client installation, such as a) powered-off computers not receiving updates, b) remote registry password updates, and c) failure of logon scripts for powered-off computers. This product is not designed for usernames with access to private, confidential, or sensitive information, .

ADVANTAGES

- Replaces TweakUI and other non-secure logon methods.
- Access common network resources without managing usernames or their passwords.
- Classrooms can use this software to give access to students without having to manage passwords.
- Ensures kiosks and other unattended computers are brought up in the running state after a restart without unsecure logon methods.
