# ShutdownPlus Rolling Restart

Silently, Centrally, Restart Terminal Servers

## RESTART TERMINAL SERVERS WITH A SCHEDULED QUEUE

ShutdownPlus Rolling Restart automatically logs off users and restarts terminal servers in a queued schedule, following a hub/spoke model. One server is the controller (hub), which restarts all the member (spoke) servers silently. First, a member server's logons are disabled, then the controller server waits until all users are logged off, until finally the server is restarted. Skipped servers are re-queued for restarting.

### BENEFITS

- CENTRALLY MANAGED TERMINAL SERVER RESTARTS
- SILENT MODE RESTARTS SERVERS WITH ZERO USER IMPACT
- DESIGNED FOR 24X7 DEPARTMENTS
- SAVES \$120 IN LOST PRODUCTION PER RESTART PER SERVER
- REMOVES ORPHANED PROFILES
- ELIMINATES IT STAFF TIME OF BABYSITTING RESTARTS
- 100% SEAMLESS TO END USERS

### ADDITIONAL FEATURES

Besides intelligent restarting, this patented software can also cleanup unused printer spooler files, run a command on the member server before a restart takes place, and even remove orphaned profiles from both the disk and from within the registry. If you don't need Silent Mode restarting, that's no problem either. The software can be configured to notify and/or log users off before a restart takes place. Additionally, a summary report of which servers were and were not restarted can be logged or sent via email or SNMP. The report even shows which users were still logged on before the restart..

### MANAGEMENT

ShutdownPlus Rolling Restart is designed for all versions of Windows Server 2000, 2003, 2003 R2, 2008, and 2008 R2, and also runs in virtualized server software and 3rd party add-ons such as VMware and Citrix. You may have used or are currently using a batch program to schedule your sever restarts. Are your users interrupted with a notification the servers are being restarted? What about those currently logged on to the server? Do you have a way to generate a summary report? Or automatically attempt to restart servers that were skipped? What about only restarting in a specific timeframe with servers that are required to be available 24x7? If not, then download a free 30-day evaluation of ShutdownPlus Rolling Restart for your terminal servers and find out what thousands of administrators already know about ShutdownPlus Rolling Restart.
