ShutdownPlus® TSE

Refreshes Terminal Servers and Keeps User Profiles Clean

BUILT-IN SCHEDULING AND SESSION CLEANUP

ShutdownPlus TSE is designed for customers to restart their terminal servers on a fixed schedule while also optionally notifying users of the restart on an interval schedule, and then logging them off before a restart. When users are logged off, their session is cleaned by deleting temporary and temporary Internet files, saving open documents, running programs at logoff or other tasks. ShutdownPlus TSE is the product to handle both server-side and session-side to keep terminal servers healthy, including scheduled maintenance modes.

FEATURES

- KEEPS TERMINAL SERVERS HEALTHY THROUGH A RELIABLE AND STANDARDIZED AUTOMATIC RESTART SCHEDULE.
- CLEANS USERS' SESSIONS TEMP FILES, SPOOLER FILES, SAVES OPEN USER DOCUMENTS, AND MUCH MORE.

BENEFITS

- LOWERS TERMINAL SERVER TCO BY AUTOMATING RESTARTS IN THE PROPER WAY
- MORE POWERFUL, THOROUGH, AND RELIABLE THAN RUNNING A SCRIPT.
- PREVENT ADMINISTRATORS FROM ACCIDENTALLY RESTARTING OR SHUTTING DOWN A SERVER.

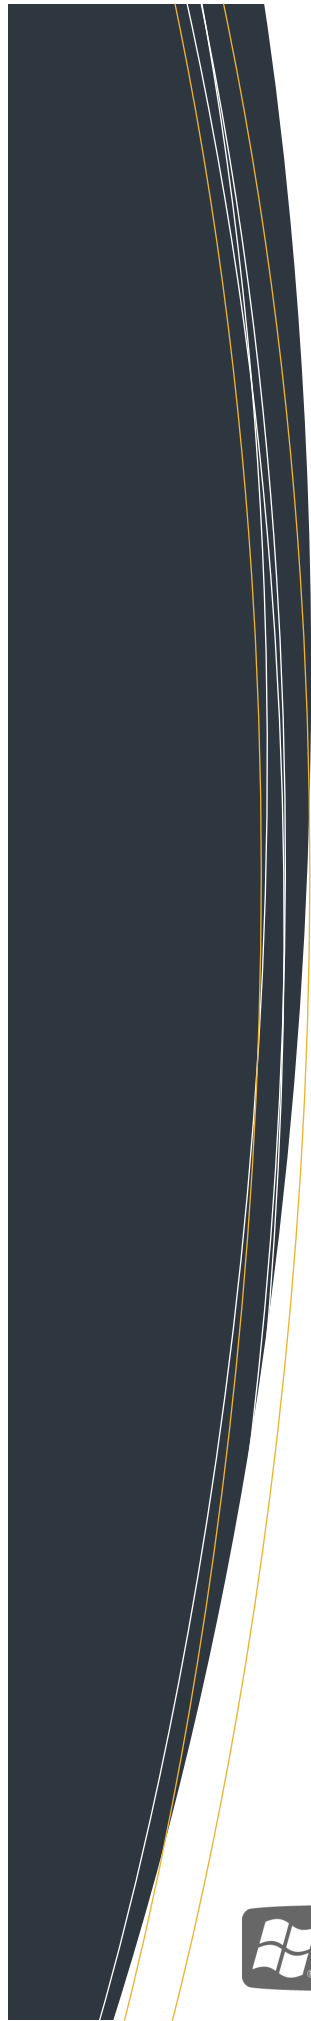

HOW IT WORKS

A recent study found that to restart a terminal server, it costs a company at least \$120 per server, per restart! This includes the administrator's time of checking the server over, identifying and contacting users of the impending restart, waiting for users to logoff, forcing users to logoff, the users' time spent to close out of their work before the restart, and the final task of the administrator babysitting the restart to ensure the server comes back online correctly.

ShutdownPlus TSE removes all of this by ensuring each user's work gets saved. There are over a dozen built-in commands available to run at session logoff, and ShutdownPlus TSE also keeps the server clean by deleting unused spooler files before a restart.

MANAGEMENT

ShutdownPlus TSE is installed on each terminal server. Settings can be sent to other terminal servers running ShutdownPlus TSE.
