

# ShutdownPlus Green

## How do you minimize computer power usage and expense?

Making smart technology choices is a great way to help your business run more efficiently. Deploying the latest technologies can help your people to be more productive, and keep your organization secure.

That's why here at WM Software, we develop our products to be supported on Windows® 7 and Windows Server® 2008 R2. ShutdownPlus Green offers the highest levels of security control and reliability. You'll also enjoy impressive system performance and resource management, as well as intuitive user interface features.

ShutdownPlus Green puts a computer into a low power state according to non-working and working times. With desktop computers consuming up to 95% of the company's computer energy usage, a company wants to save as much energy as possible on the desktop computers. However, its employees want to be able to work uninterrupted – without the computer going into Standby every 10 minutes during the work day.

ShutdownPlus Green allows the goals of both the company and its employees to be met simultaneously. Users are able to work at their computer without an overly-zealous Standby policy, while the company can put the computers into Standby after hours. With Group Policy support and Centralized Management, it is the solution for both enterprise-sized and smaller companies interested in a simple and easy way to save energy and obtain a large ROI. ShutdownPlus Green runs on all versions of Windows XP, Vista, 7, 2003/2003R2, and 2008/2008R2.

- 64% of business computers are left on overnight according to a Lawrence Berkeley National Lab Report
- A typical computer consumes 160W, which costs a business \$150/year
- ShutdownPlus Green can reduce computer power consumption up to 66% and has a >400% ROI

Try it for yourself. Download a free trial version of ShutdownPlus Green and see how it helps you build a strong foundation for your business at [www.wmsoftware.com](http://www.wmsoftware.com).

Sincerely,

*Kelley Waldron*
