

WM SOFTWARE ANNOUNCES GREEN INITIATIVE TO REDUCE ENERGY CONSUMPTION, SIGNIFICANTLY LOWERING COSTS FOR COMPANIES

ShutdownPlus Green Delivers Maximum Savings for Idle Computers

CLEVELAND, Oh –Sept 3, 2008 – WM Software Corp. today announced its Green Initiative to positively contribute to our planet's well-being, along with helping companies and homes save money on their electricity costs. WM Software has a fundamental commitment to protect the environment by being an ENERGY STAR Partner.

“Our Green Initiative was created to serve the global community by producing cost-effective software solutions that are proven to reduce carbon footprints through reduced direct and indirect electricity usage of computers. Many employees leave their computers on after work hours, and this is the potential for the largest savings at the desktop. Similarly, most homes have more than one computer. Those computers are either left running during the day with no one home, or at night when no one is using them. Quickly putting the computer into standby mode during the day when no one is at home, or at night when people are sleeping, can reduce direct home energy costs up to 16%. Reduced indirect costs for home and businesses result from less work having to cool the indoor environment due to the heat generated from computers.

"Over a period of one month, a typical desktop computer costs approximately \$15 a month in electricity usage and expels about 125 kg of CO₂ into the atmosphere. Over the space of a year, this amount of CO₂ is equal to driving a car 9 months out of the year. By implementing ShutdownPlus Green in your home or business, a savings of even \$10 per month per computer adds up very quickly," said Kelley Waldron, President of WM Software.

Our first software product to reduce costs, ShutdownPlus Green, will not only reduce overall annual energy costs through the reduction of direct power consumption, but also through reduced heat and the added expense of environmental climate controls.

“ShutdownPlus Green pays for itself very quickly, with list price of \$10 per computer,” said Kelley Waldron. “As an Energy Star Partner, we are dedicated to protecting the environment and our customers’ bottom line. Also, being a Microsoft Gold Certified Partner ensures our customers that we have the highest level of competence and expertise with Microsoft technologies.”

WM Software Corp.'s partnership with the U.S. Environmental Protection Agency's ENERGY STAR means that we will be working toward improved energy efficiency and performance; we believe that an organization-wide energy management approach will help our customers enhance their financial health and aid in preserving the environment for future generations.

About Energy Star

ENERGY STAR is a voluntary partnership between businesses, government and others united to protect our environment for future generations by changing to energy-efficient practices today. ENERGY STAR works with more than 9,000 partners to improve the energy efficiency of products, homes, buildings and businesses. Businesses can use ENERGY STAR to improve efficiency, enhance profits, and create a competitive advantage. In 2006 alone, ENERGY STAR helped businesses and consumers save more than \$14 billion in energy costs while reducing global warming emissions equivalent to those from 25 million vehicles. For more information about ENERGY STAR, visit www.energystar.gov or call toll-free 1-888-STAR-YES.

About WM Software

Since 1994, WM Software has been providing solutions based exclusively on the Microsoft® Windows® operating systems for desktops, servers, and terminal servers. All WM Software products are designed and developed in-house and are sold direct or through one of over 200 worldwide resellers. They are designed to improve scalability and reliability for customers' desktops, servers, and terminal servers. WM Software extends the capabilities and capacity of server virtualization even further through its

performance tools such as Relevos®. The ShutdownPlus® line makes sure those servers and desktops maintain the best health and reliability.

WM Software is proud to have Fortune 100 customers and over 2,000 organizations relying on our software to keep their operating systems and applications secure, reliable, and maintained so they don't have to. Current customers are in a variety of industries (medical, healthcare, banking, government, manufacturing, hospitality, commercial, retail, and many others) in over thirty-four countries.
