

Rolling Restart™

Smart, Managed Restarts for Citrix and RDS Farms

wmsoftware.com/rollingrestart

BENEFITS

- A smart-managed and centralized restart solution for Windows RDS servers, standard servers, and desktops.
- Organize computers into multiple groups with their own restart schedule.
- Five different restart methods to fit into any business scheduling.
- Fail-safe restarting.
- Eliminates babysitting server restarts when done manually or when using a script.
- Low startup cost as low as \$40 per server, depending on quantity.
- Removes inherent risks of using free-ware restarting scripts.
- Entrust the hundreds of thousands of dollars your company has spent on its server infrastructure and line-of-business apps with a backed and supported software product. Isn't it time to... ***Ditch the Script!***

Most all larger companies make significantly large investments in Citrix and RDS infrastructure in software, hardware, and staff. Purpose-built professional software ensures it remains running with optimal availability. For over 20 years, companies worldwide have trusted Rolling Restart to protect their investment. At the software's core resides our patent-pending rolling restart algorithm.

This algorithm also contains technology to ensure no end-user impact, with user load maintained across all systems during restarts and without interruptions of any kind. The software seamlessly integrates with all 3rd party load balancing software. Central management gives control to the administrators by placing servers in groups, with each group having its own restart type, schedule, and even its own timeframe. The software has built-in fail-safe measures with automated notifications.

Additional Features

The unique Silent Mode feature in Rolling Restart means server restarts do not affect end users at all. No notifications or sessions suddenly ending.

Some servers need their services stopped in a particular order, and only if those services successfully stop should the server get restarted. Rolling Restart also takes care of this.

Restarts are automatically stopped if a problem arises. Custom commands can be run, and profiles and printer spooler files can be cleaned.. Any Windows operating system (Windows 7 through Server 2019) can be restarted by a central Rolling Restart console.

CLOUD

Keeping virtual desktops and applications up and running is key to delivering solutions to end users and customers. Rolling Restart helps keep your virtual environment up and running. And being Microsoft, Citrix, and VMware partners allows us to ensure our software works in these environments.

With over 20 years of worldwide systems experience under its belt, you can trust its reliability and thoroughness. Download a free 21-day evaluation of Rolling Restart and find out what successful companies already know.

ROI / CUSTOMER VALUE

"Our \$50/hr administrators spend approximately 20 less hours each week managing restarts on our Citrix servers with Rolling Restart."

- Byron, ISP Hosting Manager

"When our servers run slow, our help desk gets flooded with calls. Slow speed in our industry directly impacts care we provide and the health of our patients. We experienced a 70% decrease in help desk calls about slowdowns."

- Jonathan, Hospital IT Director

"Our lawyers make over \$1000/hr. Before Rolling Restart, lawyers would get bumped off at night while they are working, or they would be working slowly. Any interruptions causes a loss in revenue. We estimate we save about \$7000 each month by using Rolling Restart."

- Marek, Law Firm IT Manager

TESTIMONIALS

"Our business relies on providing applications to our end users to do their job. With something as important as restarting these Citrix servers, I prefer a tried and tested tool. That's why I use Rolling Restart."

- Byron, ISP Hosting Manager

"I will always choose a company with a fully supported software product for my Citrix servers over any script. And your support is fantastic."

- Thomas, City IT Manager

"We have too much invested in our server environment to trust anything else. Rolling Restart has been our choice for many years and I highly recommend it."

- Jonathan, Hospital IT Director

"Rolling Restart saves us from getting a 3AM call about a Citrix server issue caused by being un-rebooted for weeks and has degraded seriously since. It keeps our Citrix farm healthy by rebooting our servers while everyone sleeps. Thanks again and keep up the good work. "

- Marek, Law Firm IT Manager

No matter what size farm, what version of Citrix® XenApp, XenDesktop, or Microsoft RDS, on-premises or in the cloud, Rolling Restart will get the job done with no user impact, no babysitting servers, with full reporting and fail-safe methods. Rolling Restart runs on Windows Server 2008 R2, 2012, 2016, and 2019.

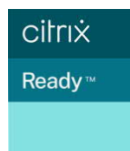

Our software helps companies worldwide by decreasing costs and increasing uptime and reliability.

Our solutions target problems that exist everyday within all organizations, regardless of size, industry, or location. From Fortune 100 companies, to SMBs, our software is installed worldwide, saving companies money and time, and increasing their ROI, along with avoiding unnecessary risk of system failures.

You can evaluate our software free of charge during its evaluation license period. When you are ready to purchase, you can do so online, through your sales representative, or through one of our 100+ resellers in over 15 countries. See how our software can provide your company real solutions that work.
