

# ROLLING RESTART

## MANAGED RESTARTS FOR SERVER FARMS

[www.wmssoftware.com/rollingrestart](http://www.wmssoftware.com/rollingrestart)

Control and centrally manage server restarts using five different restart methods, with zero impact to end users.

No matter what size farm, what version of Citrix® XenApp, XenDesktop, Microsoft RDS, sessions or VDIs, physical or virtual machines, on-premises or in the cloud, Rolling Restart will restart computers with no user impact. full reporting using fail-safe methods. No more babysitting servers for a change.

Three editions for small, medium, and enterprise farms.

Rolling Restart is the de facto standard, the result of over twenty years of user feedback running in datacenters across the world. Servers are your users' and company's lifeblood - you can't afford to trust your business with a restart script.

# Safe autologon, Safe autologon password server (salps)

256-bit aes automatic logons

[www.wmsoftware.com/safeautologon](http://www.wmsoftware.com/safeautologon)  
[www.wmsoftware.com/salps](http://www.wmsoftware.com/salps)

Control usernames and passwords for the Safe AutoLogon client from one location. Synchronize passwords with Active Directory. Passwords can be automatically changed on a regular basis to remain HIPAA compliant.

Say goodbye to the age old practice of storing clear texts in the Registry for automatic logons. And also wave sayonara to programs that claim to store store "safely" in the Windows LSA. These are well known and easily cracked.

Use Safe AutoLogon on hospital computers running Epic®, kiosks, vehicles, warehouse equipment, desktops, servers, and so on. Any Windows computer you want to automatically logon.

SALPS is the management solution for our Safe AutoLogon software. SALPS stores encrypted passwords for domain users, and gives the password for Safe AutoLogon clients.

WM Software has solved IT issues for thousands of customers worldwide in just about every possible industry, and it's created many invaluable partnerships with value-added resellers, consultants, and systems integrators.

WM Software has formed critical industry alliances as a Citrix Ready Partner, Certified Microsoft Partner, VMware Technology Alliance Partner, and Intel Premier Partner to ensure not only the benefits of today's technology in our software, but the compatibility for our software in the future.

In its 25 years in business, WM Software has experienced rapid growth, yet still maintains the privately owned and operated atmosphere of a company that is quick to meet customer needs.

## relevos

Ensures Users run without delays

[www.wmsoftware.com/relevos](http://www.wmsoftware.com/relevos)

Even with powerful CPUs, when users scroll pages or PDF documents, the CPU works overtime, crowding out other users' fluid experiences. To avoid this and increase user server capacity, Relevos throttles the CPU of user processes.

Our own patented CPU Throttling algorithm is unique in the industry.

No "fake-throttling" by using Affinity or Priority...Relevos is TRUE CPU Throttling. Relevos monitors processes and automatically throttles unruly ones.

Dynamic CPU Throttling, CPU Affinity, and CPU Priority gives admins fine control over processes, ensuring top performance and the best user experiences.

Over 15 years with constant development, in use worldwide. Keep your users humming along today!
